

Translate the figure 8 units left and 5 units down.

Jaxon's "Counting" Method

I moved point **A** 8 units to the left and 5 units down.

I moved point **B** 8 units to the left and 5 units down.

I moved point **C** 8 units to the left and 5 units down.

I plotted all the new points to find the new triangle.

Translate the figure 8 units left and 5 units down.

Maxine's "Algebraic" Method

$$\begin{aligned} A(1, 1) \\ 1 - 8 &= -7 \\ 1 - 5 &= -4 \\ A'(-7, -4) \end{aligned}$$

$$\begin{aligned} B(5, 2) \\ 5 - 8 &= -3 \\ 2 - 5 &= -3 \\ B'(-3, -3) \end{aligned}$$

$$\begin{aligned} C(3, 5) \\ 3 - 8 &= -5 \\ 5 - 5 &= 0 \\ C'(-5, 0) \end{aligned}$$

To move point **A** 8 units left, I subtract 8 from the x-coordinate, and to move 5 units down, I subtract 5 from the y-coordinate.

I did the same thing for point **B**.

I did the same thing for point **C**.

I plotted all the new points to find the new triangle.

Translate the figure 8 units left and 5 units down.

Jaxon's "Counting" Method

Maxine's "Algebraic" Method

I moved point **A** 8 units to the left and 5 units down.

I moved point **B** 8 units to the left and 5 units down.

I moved point **C** 8 units to the left and 5 units down.

I plotted all the new points to find the new triangle.

$$A(1, 1)$$

$$1 - 8 = -7$$

$$1 - 5 = -4$$

$$A'(-7, -4)$$

$$B(5, 2)$$

$$5 - 8 = -3$$

$$2 - 5 = -3$$

$$B'(-3, -3)$$

$$C(3, 5)$$

$$3 - 8 = -5$$

$$5 - 5 = 0$$

$$C'(-5, 0)$$

To move point **A** 8 units left, I subtract 8 from the x-coordinate, and to move 5 units down, I subtract 5 from the y-coordinate.

I did the same thing for point **B**.

I did the same thing for point **C**.

I plotted all the new points to find the new triangle.

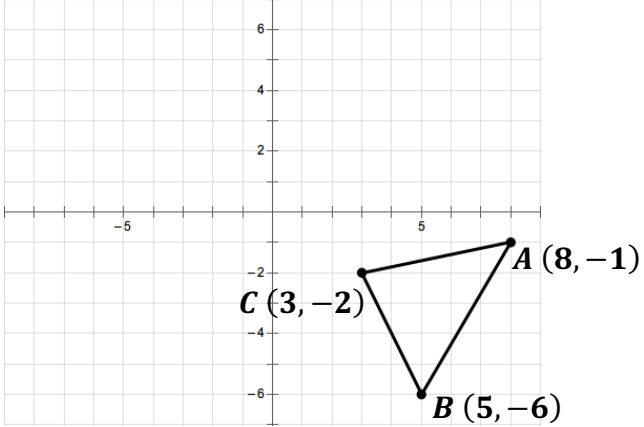

T.1: Translation

1) What are the similarities and differences between Jaxon and Maxine's methods?

Similarities	Differences

2) Use Jaxon and Maxine's methods to translate $\triangle ABC$ 10 units left and 7 units up.

<p>Jaxon's Method Draw and label the coordinates of your translated figure.</p>	<p>Maxine's Method Show your work in the space provided below.</p>
	<p>$A(8, -1)$ $B(5, -6)$ $C(3, -2)$</p>

3) Are their translated triangles and their original triangles the same size and shape? Explain your answer.

4) What happens to the coordinates of a figure when it is moved:

a) to the left?

b) to the right?

c) down?

d) up?

Translate the figure 8 units left and 5 units down.

I always thought about translations as moving the figure left, right, up, or down, but Maxine showed me you can also translate something by adding or subtracting from the x - and y -coordinates.

Jaxon

I moved point A 8 units to the left and 5 units down.

I moved point B 8 units to the left and 5 units down.

I moved point C 8 units to the left and 5 units down.

I plotted the new points and found the new triangle.

$$3 - 8 = -5$$

$$1 - 5 = -4$$

$$C'(-5, 0)$$

I did the same thing for point C .

I plotted all the new points to find the new triangle.
