

Design & Pitch Challenges in STEM

Teacher's Guide - Prototype to Profit

Welcome to the Design & Pitch Challenges in STEM!

Whether this is your first time implementing a Design & Pitch Challenge or your ninth, we are excited to have you on our team of innovative practitioners who are bringing entrepreneurship and career readiness to the forefront of STEM.

In this document, you will find a variety of resources that will help you implement the Design & Pitch challenges with your students. These resources include:

1. an overview of the Design & Pitch (D&P) Process;
2. a list of Teacher Tips from the D&P team and other teachers who have used the challenges in their own classrooms.
3. a “Where’s the Math?” document that outlines the standards and topics covered by the challenge;
4. a table of Implementation Models that outline what various timelines might look like for completing the challenges; and
5. a breakdown of each major step in the process in the context of the Prototype to Profit challenge.

This guide is specifically designed around Prototype to Profit, which is one of the nine D&P challenges. Prototype to Profit encourages students to design a business around an item that they select from a pre-populated list (or found via some other avenue). The goal of this challenge is not to create a new product but rather to design a business around an existing innovative idea. While completing this challenge, students will encounter and develop understanding of mathematical topics like linear functions and algebraic expressions while engaging in an effort to design an effective business plan.

Our free materials can be accessed online at <https://sites.ced.ncsu.edu/design-and-pitch/>. If at any time you have a question about the materials or would like to discuss them in greater detail, feel free to reach out to the D&P team at design_pitch@ncsu.edu. We are here to help you in whatever way we can!

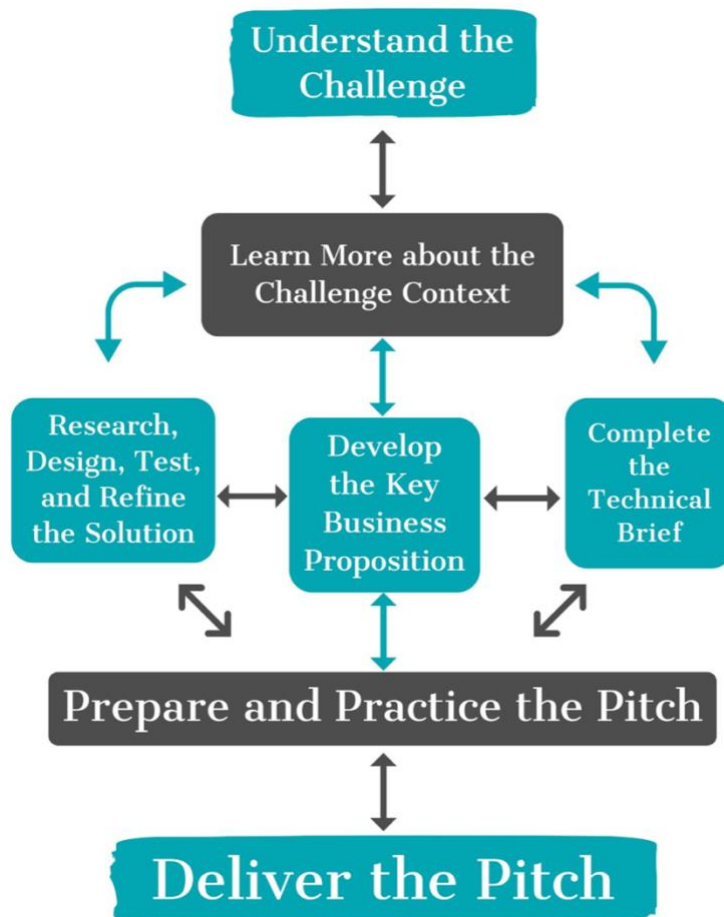

Thank you for your interest in the Design & Pitch Challenges in STEM!
The Design & Pitch Team

THE DESIGN & PITCH PROCESS	4
TEACHER CHECKLIST.....	5
PROTOTYPE TO PROFIT	6
WHERE'S THE MATH?	7
MATH RESOURCES AND TECH TOOLS	9
IMPLEMENTATION MODELS.....	10
DESCRIPTION OF SESSIONS	11
THE PROCESS: UNDERSTAND THE CHALLENGE	12
THE PROCESS: LEARN MORE ABOUT THE CHALLENGE CONTEXT.....	14
THE PROCESS: RESEARCH, DESIGN, TEST, AND REFINE THE SOLUTION	15
THE PROCESS: DEVELOP THE KEY BUSINESS PROPOSITION.....	16
THE PROCESS: COMPLETE THE TECHNICAL BRIEF	17
THE PROCESS: THE PITCH	18

The Design & Pitch Process can be thought of as a flowchart, where the process begins at the top and flows bidirectionally from one step to the next. It flows bidirectionally because students are encouraged to work through the Challenges iteratively, meaning they should be revisiting previous parts of the process as they work toward their solution and the delivery of their pitch.

Throughout this Teacher's Guide, we will break down the steps of the D&P Process in the context of the Prototype to Profit Challenge. The pages that directly relate to one of the steps in the process will begin with headers that include 'THE PROCESS' and the name of the specific step. You can also find these pages labeled on the Table of Contents for your convenient navigation.

General Suggested Materials: The following list is meant to serve as a helpful starting point. There may be items specific to each challenge in addition to those outlined below.

- Computers with internet access
 - The D&P Website: <https://sites.ced.ncsu.edu/design-and-pitch/>
- Presentation tools like PowerPoint, cameras, movie-making programs
- 2-3 judges (for the culminating event)

General Teacher Preparation:

- **Become familiar with the challenge** – Be sure you have walked yourself through the challenge, reading over the materials and the resources available to students.
- **Collect materials** – you might limit this to supplies you already have in the classroom or allow students to bring in materials from home to encourage creativity. After students brief themselves about the challenge, you might have students help describe the list of possible materials they might need, given any possible constraints like costs, size, etc.
- **Confirm online access for students** – Research is a primary component to the D&P Challenges, so students will need to have access to the internet. This can also be helpful in sharing documents and materials. *Note: If your students do not have internet access, consider printing the PDF versions of the materials available on our website.
- **Set a date for the “judging”** – Be sure all of your judges can attend the competition!
- **Prep your judges** – Be sure to schedule a meeting with your judges ahead of time. During this meeting, have the judges watch the *Setting the Stage with Your Challenge Champion Video* and review the *Pitch Judging Sheet*.
- **Consider what format the culminating activity will take** – will this be a district-wide or school-wide competition, or will this be implemented in a classroom?

Tips from Other Teachers:

- **Use the Challenges to teach [21st century skills](#)** – so many soft skills are built into the D&P Challenge Process, so be sure to use the process as a chance to teach presentation, organization, teamwork, and many other skills that students need to have to be successful in the 21st century
- **Bring other teachers on board** – depending on the challenge you and your students choose to tackle, you might consider working with another content teacher to cover more standards and increase the levels of engagement and learning

Questions?

The D&P Team is here to help! If you have questions, email us at design_pitch@ncsu.edu.

What is Prototype to Profit all about?

Being an entrepreneur is about finding problems and turning them into opportunities. It's about inventing new solutions that create value for customers and using those solutions to make money, because even the best ideas need funding to succeed. At the heart of making money is finding the right business model type. The right business model type can be the difference between success and failure for an idea. And, sometimes, the business model type itself is the solution.

This is the statement posed to students in the Prototype to Profit challenge. In the [Launch](#), students are introduced to Challenge Champion Tyler Maloney, a material scientist and entrepreneur who has mentored others as they learn how to take an idea and turn it into a business. This champion explains that a product must meet the needs of customers if it is to succeed, and that a successful business starts with a solid business plan.

Along the way, Maloney offers tips and suggestions for the students as they research their possible solutions and begin developing their businesses. [Several resources](#) are provided to aid in students' research, but they are encouraged to reach beyond these resources to find the information they need.

Why might my students find this challenge interesting?

Prototype to Profit was designed to encourage creativity and personalization for students. This challenge requires students to balance their creativity with practicality as they work to market and build a business around a pre-existing item. They can choose from the [List of Innovations](#) curated by the D&P team, or they can choose to build a business around an item that they know of independent of this list. As they develop their businesses, students will develop mathematical expressions and functions to represent cost, revenue, and profit, model those functions graphically, and work to solve systems of these functions to find their "break even" point.

DESIGN&PITCH CHALLENGE

WHERE'S THE MATH?

Each challenge has been carefully designed to align to the Common Core State Standards for Mathematics (CCSS-M). To make your job easier, we have compiled a brief overview of each challenge, including a summary of mathematical topics and a list of CCSS-M standards covered within each one. We categorize each standard as either a standard we intend for students to encounter or an additional standard that students might encounter. The **standards we intend for students to encounter** are standards we anticipate will be covered by solutions that meet the requirements of the challenge. The **additional standards that students might encounter** are standards that students could uncover as they are digging into their solutions but are not the focus of the challenge.

Our team has created several overview documents to help you get a quick glance at all nine challenges. The [Challenge Matrix](#), pictured below, provides you with a one-page reference sheet that includes the Challenge Image, Title, Description, Champion, and Mathematical Topics. The [Standards Alignment](#) document enumerates the concepts most likely to come out during the challenge for each of the D&P challenges. These documents are all available on the Teacher Resources page of the D&P website.

Design and Pitch: Challenges in STEM Overview of Challenges				
Challenge Image	Challenge Title	Description	Challenge Champion	Mathematical Topics
	Operation Lifeline	During natural disasters, delivering essential supplies like water, food, and medicine becomes a race against time. This challenge becomes even harder when the supplies have to be kept cold the whole time so that they don't spoil. In this Design & Pitch Challenge, you will find a workable solution for this important problem.	Kris Ludwig Scientist at the United States Geological Survey	3-D Figures; Proportional Reasoning
	Power Me Up	Gas-powered vehicles release harmful greenhouse gases and rely on a natural resource that will someday be gone. As a result, more and more people are buying electric vehicles. More electric vehicles means there is a need for more electric vehicle charging stations. This is an opportunity for savvy entrepreneurs. In this Design & Pitch Challenge, you will plan design a company that builds charging stations for electric vehicles.	Kristin Vicari Senior Chemical Engineer at Tesla	Analyzing Data; Proportional Reasoning
	Keep It Real	Smartphones are everywhere. They make so many things easier. We can get a ride, order a pizza, and connect with people across the world with a single tap of the screen. But what happens when smartphones get in the way of communication? In this Design & Pitch Challenge, you will design a way to help people put down their phones and connect, face-to-face.	Cardell Patillo Executive Director of Mile High Kids	Collecting, Analyzing, and Representing Data
	Building Algorithms	In today's internet world, data on people's opinions are highly prized. One way to understand those opinions is to ask people to complete surveys. Researchers then create formulas, or algorithms, that analyze their survey responses in an automated process. Many successful businesses are built around algorithms. Your challenge is to build an algorithm that uses people's opinions to rate or rank something you care about and that can be the start of a successful business.	Cathy Yee CEO & Founder of Inclusive	Equations and Inequalities; Percentages
	Prototype to Profit	Being an entrepreneur is about finding problems and turning them into opportunities. It's about inventing new solutions that create value for customers and using those solutions to make money, because even the best ideas need funding to succeed. At the heart of making money is finding the right business model type. The right business model type can be the difference between success and failure for an idea. And, sometimes, the business model type itself is the solution.	Tyler Maloney Materials Science Engineer & Entrepreneur	Representing and Solving Linear Functions
	Erase Food Waste	The way food looks is one indicator of whether it is safe to eat. But in the United States, we take this idea too far. Most grocery stores and restaurants won't offer produce to their customers that isn't perfectly shaped and colored, even if it is perfectly safe to eat. This results in a lot of food waste. In this Design & Pitch Challenge, you will design a food-related business that uses a sliding price scale to reduce food waste.	Oscar Ekponimo Founder & CEO of Chowberry	Percentages; Data Collection and Analysis
	Fix It: Design for Community Impact	In every community, there are problems that need solving or things that need improving. The most effective solutions are ones that meet the needs and desires of the community. If you pay attention and ask questions, you will notice what people want and what they need. Entrepreneurs don't wait on the sidelines for others to do the work. They jump in and use their energy and passion to make change happen. What can you fix in your community?	Gitanjali Rao Inventor & STEM Promoter	Proportions; Transformations; 3-D Figures
	Flashy Fashion	Technology can now be integrated into clothes, bags, and wearable devices for both self-expression and health & safety applications. Designers' creativity is shining in fashion shows, and tools like LEDs are now accessible enough that anyone can learn to make wearable technology. How will your design light up the world?	Kelcy Dominick Designer & CEO of DiDomenico Design	Coordinate Plane; Transformations; Domain and Range
	Pollution Solution	Plastic is a big environmental problem. The world is becoming overwhelmed by plastic waste, especially plastic containers that hold consumer products. Can you imagine a solution to replace plastics that does not cause as much harm to the environment?	Clifford Okoth Owino Founder & CEO of Chemolex	3-D Figures; Data Collection and Analysis

Summary

In Prototype to Profit, students will use **algebraic reasoning** to build a business plan that will convince investors to fund their chosen product. They will need to think about **business math** concepts, like **expenses**, **revenue**, and **profit**. Each of these concepts includes further considerations, such as one-time expenses, ongoing expenses, selling price, and break-even points.

Standards

In building their solutions, students are likely to engage with the following mathematical standards.

Standards We Intend for Students to Encounter

- Algebra
 - Representing and Manipulating Algebraic Expressions
 - Translate a business plan into an algebraic expression [6.EE.A.2.A](#)
 - Simplify algebraic expressions [6.EE.A.2.B](#)
 - Representing and Using Linear Functions
 - Create and graph an equation to represent profit over time [7.EE.B.4](#)
 - Analyze a graph [8.F.B.5](#)
 - Solve Simultaneous Linear Equations
 - Determine the break-even point above which they will begin to make a profit [8.EE.C.8.A](#), [8.EE.C.8.B](#), [8.EE.C.8.C](#)

Opportunities for Math in the Challenge

After deciding on their product, students will need to apply the concepts of **expenses** and **revenue** to determine their break-even point. Students should think about one-time and ongoing expenses to ensure that they are creating a product that will be **profitable** and attractive to investors. To find their break-even point, students will have to find the point where revenue equals and then exceeds expenses, which provides an opportunity for students to find **solutions to simultaneous linear equations**.

Math Resources - Workshops

One way to help students achieve the intended math goals for a challenge is to have small group workshops with your students. These workshops allow you to instruct and remediate on targeted math concepts as needed. You can run workshops with select students, a single team, multiple teams, or the whole class depending on the needs of your students. For example, in Prototype to Profit, you may find that you need to help your students brush up on finding the solution to two linear equations. This is a topic that can be addressed using a workshop model. By pulling a small group of students together for a workshop on solutions to systems of linear equations, you will be able to address individual needs and misconceptions while situating the math in the context of students' specific solutions.

Tech Tools

Each of the D&P Challenges includes a Tech Tool that is designed to help students develop a deeper understanding of the mathematical content embedded in the Challenge. For Prototype to Profit, if you choose to have your students use it, the Tech Tool is a [Financial Business Plan](#) resource, a spreadsheet resource that we designed to help students consider the business math concepts of one-time expenses, ongoing expenses, revenue, profit, and break-even points. This resource walks students through an example and then provides a template they can use to explore these concepts in the context of their own solutions. We have also built a [Desmos activity](#) to accompany the example in the spreadsheet. You can access both of these resources through a few places on our website. There are links at the bottom of the [Prepare](#) page, and the spreadsheet is also featured on the [Tech Tools](#) section of the website.

Ways to Use D&P

Design & Pitch challenges can be used in a variety of ways - as core or supplemental materials and in both in-school and out-of-school settings (e.g., after-school clubs, summer camps, Boys & Girls Clubs). There is no “right” way to implement the challenges. Instead, we encourage you to think about how D&P can best fit into your classroom. The D&P team offers professional development opportunities to help teachers dive into the materials in a fun, collaborative setting, and we are happy to meet one-on-one with any teacher who is interested in using the challenges.

Classroom Implementation

For your pacing purposes, we have broken the D&P Process into 6 sessions, which can be found on the next page. You will also find a “Session 0” that can be helpful for those teachers and students experiencing Design & Pitch for the first time. Each of these sessions assumes students will have a 45-minute class period in which to work. For longer or shorter class periods, consider adapting the sessions to meet your needs.

In the past, we have seen teachers complete multiple challenges in a semester, implementing some challenges over consecutive days and completing others a couple days per week for a couple months. The goal is to fit D&P into your schedule rather than try to squeeze the diverse needs of your students into a regimented box.

Including the Community

D&P challenges are also well positioned to provide opportunities for schools to connect with and engage family members, community members, local businesses, and/or town governments. Local STEM professionals or other members of the community with expertise in areas relevant to each challenge can serve as mentors throughout the design process, offering feedback on prototypes and business plans, and may be recruited to judge final projects.

Session 0

If it is your first time using Design & Pitch Materials, a day introducing the ideas may be advisable. Introduce the idea of D&P, what it means to be an entrepreneur, and what a pitch competition is.

Students discuss the Entrepreneurial Wheel and the D&P Process flowchart (see p. 4).

Briefly discuss the various aspects of the D&P Challenges (e.g., Challenge Statement, Key Business Proposition, Tech Brief, Pitch).

Session 1

Launch: Introduce Challenge (video and Challenge Statement); form teams of 3-4 students.

Prepare: Students begin exploring and researching, including Helpful Resources on the Prepare page of the website. Students brainstorm ideas and sketch initial solution.

Engage: Review things students should submit by the end of the Challenge (which can be found on the Engage page) at this time.

Session 2

Engage: Students review Business Models and begin working on Key Business Proposition (KBP).

Students discuss initial thoughts about their business model and what their customers and/or users want.

Students revise product in light of business model and KBP.

Session 3

Engage: Introduce Technical Brief and Technical Brief Grading Rubric.

Students conduct further research and design prototype.

Session 4

Engage/Persuade: Students review How to Build a Pitch and Pitch Judging resources.

Students build initial pitch deck.

If able, students conduct tests on their prototypes and make final revisions.

Teams continue working on Technical Briefs.

Session 5

Engage: Students discuss and finalize KBP.

Engage/Persuade: Students present pitch to practice judges for feedback. Students analyze feedback and revise their pitches, solutions, and business propositions.

Teams revise and complete Technical Brief and Pitch.

Session 6

Students pitch their solutions to a panel of judges (possible investors).

Students hand in Technical Briefs.

Winner(s) announced.

Optional: Awards / Celebration

Launch

Once you have selected and prepared for a challenge, it is time to [launch](#) the challenge with your students. Each challenge includes a Challenge Statement video, in which the Challenge Champion (each challenge has a unique Champion to guide the students through the Launch and Prepare sections) establishes the context or problem and formally issues the challenge. In the video for Prototype to Profit, material scientist and entrepreneur Tyler Maloney briefly explains the difficulties of turning an idea into a business and introduces the components of the challenge.

Summary and Scenario

Following the Challenge Statement video is a Summary and Scenario section, where the challenge is briefly summarized for the students. This section also begins to explore the significance of the issue so as to convince students that this problem deserves their attention. In the Prototype to Profit challenge, for example, students are presented with several interesting inventions that are the product of great ideas, followed by the realization that not all great ideas make great products. This fact engages students and pushes them to think about what it takes to take an interesting idea and make it into a successful product.

As you launch the challenge with your students, you might consider showing them additional videos that emphasize the issue in your specific challenge or facilitating a discussion in which you encourage them to reflect on their experiences with the issue. For Prototype to Profit, for example, you might show images or videos of great ideas that have not withstood the test of time, such as Apple's Newton device, Nintendo's Virtual Boy console, or Microsoft's Zune mp3 player, followed by a discussion about why they did not last. The goal here is to tailor this section of the challenge to your students' interests and grab their attention; this is the time to bring out your teacher 'hook!'

Challenge Statement

The final piece of the Launch is the [Challenge Statement](#) itself. This document outlines the challenge and describes the areas that should be addressed by the students' products/solutions and businesses. While the students are encouraged to be innovative in their solutions, the following criteria are laid out to get students to interact with the targeted math topics. The Challenge Statement for Prototype to Profit explains that the students are to **build a plan and pitch that will convince investors to fund your business for your chosen product** and that their business should include:

1. Explain what the product does and how it works.
2. Describe your target customers and why they will want to buy your product, using [Key Business Proposition](#).

3. Include a financial business plan* that accounts for financial factors. Review [Key Business Proposition](#) and [Business Models](#).
4. Describe for investors when your business will begin to make a profit.

*Use the Prototype to Profit [Financial Business Plan Resource](#) to build your plan.

Brainstorming

As you introduce the challenge to your students, it is important to allow them to brainstorm along the way. They might be thinking about issues they find important or possible solutions. They might be thinking of business strategies or about the final pitch. They might be thinking about questions they have or things they will need to know along the way. As such, they might need help organizing their thoughts, and brainstorming as a class or small group can help them do this. You might ask them to discuss things they noticed in the video and challenge statement and things they still wonder about. If students have already been organized into groups, you can have them record their brainstorming somewhere that will be accessible for all group members; if you are brainstorming as a class, you might consider recording ideas on a poster board or bulletin board so the class can refer back to their original thoughts later. These thoughts can include words, pictures, or anything else the students come up with during their brainstorming session. After teams have been formed, it is also important for members to discuss norms and expectations for their team in order to develop accountability. This can be done during the brainstorming session or after, but it is important to have teams set their expectations early in the process so that they can be referred back to as the challenge progresses.

Prepare

In this part of the challenge, students will conduct the research necessary to design and market their product. In order to facilitate this part of the challenge, we have included several tools on the [Prepare](#) section of the website.

Tips From Your Challenge Champion

At the top of the [Prepare](#) page, you will find a brief biography of the Challenge Champion, followed by a Background video from this expert. In Prototype to Profit, Tyler Maloney takes students on a deeper dive into his background and the steps he took to become an entrepreneur and mentor to others who wanted to tackle entrepreneurial issues.

Helpful Resources on Business Plans

Below the Background video, we have included several resources that students might find helpful as they learn more about business plans. These resources include articles, websites, videos, and much more. Students are encouraged to peruse these resources and go beyond those listed on the website to learn as much as they can about the issues surrounding expenses, revenue, and profit before they begin designing their plans and as they continue to test and refine their solutions. You might have to do some research with the students and suggest phrases for them to Google if they are trying to find additional resources to help develop their ideas and businesses.

Prototyping

Once students are familiar with the requirements and context of the challenge, it is time for them to begin working on their solution. This is a great opportunity to check in with students as they work. Ask them to explain their entrepreneurial solution and follow up with questions that drive back at the challenge criteria. For example, if students are designing a business around a battery-free flashlight, ask them how many flashlights they will have to sell before they make a profit and how they know. Explain that judges will want to know the specifics of the solution.

Research

Depending on the ideas your students develop, they may need to go beyond the resources provided to understand what their solution might require. For example, your students might want to build a business around a product other than the ones they learned about on the Prepare page of the D&P website. That is wonderful, and we encourage students to be as inventive as possible! It might require them to do some additional digging, though, and this is where they can begin that research.

Design

Once students understand what their solution will require, they are ready to begin designing their solution. This will involve developing a business plan; for Prototype to Profit, we recommend students use the [Financial Business Plan spreadsheet](#) to build their plan. This tool walks students through an example of a financial business plan and provides a template for them to build their own. This resource can be found on the [Tech Tools](#) page of the D&P website.

Test and Refine

The brilliance of entrepreneurship is that designs that don't work are viewed as learning opportunities. As students test their initial designs, they might find that something went wrong. Maybe their first plan takes too long to reach profitability. Maybe they need to charge more for their product. For our young entrepreneurs, this is a chance to take a step back, re-evaluate, and refine their design. This is a good time to encourage your students to revisit (or take a first look at) the helpful resources on the Launch page. It might take several attempts before they find something that works, and that is okay.

As a teacher, you have a lot of flexibility in how you run this part of the challenge. Some teachers have groups pair up to share their ideas and give feedback. Other teachers have done this as a whole class discussion. This is a great time to practice informal presentation skills and giving constructive feedback.

Developing a Business

The Design & Pitch Challenges are a great way to get students to think creatively about real-world issues, but they are also about building a viable business. As such, one part of the D&P Challenges that students must consider is the Key Business Proposition.

Business Models

One of the first questions students must answer about their business is how their solution is going to create value, which includes identifying a business model so that you can reach your target customers. We have provided a [list of common business models](#) for students to consider. This list is not comprehensive; students are welcome to research and select a business model that is not on this list.

Key Business Proposition

Once students have decided on the model for their business, they can begin working on the [Key Business Proposition](#). This document is designed to get students thinking about a variety of business-related questions, including the following:

- Who are your customers and/or users? What do they want out of a solution?
- Why do they need your design more than someone else's?
- How does your solution enhance what customers like about their situation and fix what they dislike?

We find that students often lose sight of the customer through the process of designing their solution, and the Key Business Proposition can be used to remind them of the ultimate goal: design a product *to help* someone or some community. This is another opportunity to drive the students back to the targeted math goals. Asking questions like “How many items do you need to sell in order to break even?” and “What aspects of your business will make investors want to give you their money?” is a great way for students to think about both the math and the needs of their customers and investors. You might also encourage students to think about their own experiences with similar products as they begin to justify what customers want or need.

Technical Brief

The [Technical Brief, or “Tech Brief,”](#) gives students the opportunity to reflect on the D&P process and their solutions and connects directly to the targeted math concepts. It is also a chance for the students to explain their solution in greater detail for the investors. As such, it can be completed along the way or after the final pitch and provides you the opportunity for small group instruction as needed. Some of the questions ask students to identify strengths they noticed and challenges they overcame along the way, so you might want to encourage students to be thinking about these items as they are working on their solution.

There are seven parts to the Tech Brief, which are outlined below. The first six parts are generally common to all nine D&P Challenges, though Prototype to Profit boasts a completely unique Tech Brief. In all challenges, however, Part 7, is challenge specific and drives students to think about the math behind their solutions.

Part 1. Briefly describe your selected product and the problem it solves.

Part 2. Describe why you chose your selected product. What about the product made you think it could be a good business idea?

Part 3. For any products in the list you thought about using but didn’t, explain why you didn’t choose them.

Part 4. How did developing your Key Business Proposition and related Business Models Type affect your financial business plan?

Part 5. Your final plan probably looked different from your original plan. Describe the process for how you developed your plan for your selected product from start to finish.

Part 6. How well do you think your business will work under real-world conditions? Explain your reasoning.

Part 7. Fully describe your Prototype to Profit solution based on the questions below.

1. What does your product do and how does it work?
2. Who are your customers?
3. What are your business expenses?
4. What are your revenue sources?
5. When will your business make a positive profit?

Grading Rubric

While there are many ways you might choose to assign a numeric or letter grade to your students’ work, we provide [a rubric](#) for the Tech Brief to help you assess the mathematical content behind each solution. Each rubric is designed to align to Part 7 of the Tech Brief and is unique for each challenge. In keeping with the entrepreneurial spirit, criteria are rated as “Getting Started,” “Improving,” “Good,” or “Excellent” in order to encourage students to keep working hard.

Prepare and Practice the Pitch

Once your students have designed and refined their solutions, it is time for them to pitch their ideas to the investors. As students begin to build their pitch deck (i.e., the slides they will use to present their solutions to the judges), it will be useful for them to review two resources that can be found on the Engage and Persuade pages of the website: [How to Build a Pitch](#), which walks students through the components of a successful business pitch; and the [Pitch Judging Sheet](#) – a score sheet that judges will use to evaluate each of the solutions and choose a winning team.

On the [Persuade](#) page, students also have access to three example pitch decks from existing companies (Air BnB, YouTube, and Podozi). These are meant to serve as idea-generating examples, not templates, for the students to use to understand what a pitch *can* look like and how important elements can be incorporated into a winning pitch. Once students have developed their initial pitch decks, they should practice the pitch before delivering it to investors. This can take a variety of forms, including having teams pitch to one another, to the whole class, or to a single individual (e.g., teacher, administrator, or community member). This is a time for the students to receive critical feedback so they can develop their ideas more completely before the final pitch.

Deliver the Pitch

Presenting the pitch is one of the most exciting parts of the competition for students (and teachers). All of the hard work each student has put in up to this point culminates in this persuasive presentation. As a standard rule, students only have five minutes to pitch their solution to the panel of judges (more on the judges below), though you, as a teacher, have control over how long students have to present. The suggested five minutes encourages students to be succinct and helps them to become effective communicators. In addition to overall winners, we encourage you to assign superlatives to all teams, such as awarding Best Business Design, Most Creative Solution, Best Pitch or Most Engaging Pitch, Overall Best Solution.

Preparing a Panel of Judges

Students love the opportunity to share their work with people external to the classroom. In the past, we have seen panels of principals, parents, community members, college professors, and other experts from the field. For Prototype to Profit, you might consider members of your community who have experience working as entrepreneurs or business professionals. To help your judges prepare for their role, provide them with some background info, such as a link to the challenge website, and the [Pitch Judging Sheet](#) ahead of time so that they can understand what they are going to be judging. As for grading the pitch, some teachers use the Pitch Judging Sheet to assign a grade, some develop their own method for scoring the pitch, and still others choose not to assign a grade to this part of the Challenge. We encourage you to think about what works best for your classroom and assessment practices.

This teacher’s guide was created by the Design & Pitch team, a group of mathematics education researchers in the Department of STEM Education at North Carolina State University. The D&P materials were created in partnership with Scaling Up Digital Design Studies (SUDDS), Exploring Mathematics Curricula Creatively (EMC²), and JASON Learning.
