Environmental Educator

Job Description: Educate the public about environmental issues and nature by working with schools, nature reserves, nonprofits, and your local community.

What does an Environmental Educator do?

- Guide field trips for schools and other groups
- Create and promote public programs on the environment
- Give talks to schools and community groups about environmental issues and nature
- Analyze and interpret data from different sources
- Create resource materials like lectures or videos for public and personal use, other educators, and other stakeholders
- Help develop programs in your community
- Prepare grant proposals
- Mentor other educators or team members
- Participate in fundraisers or other activities

Your Interests:

- Are you interested in nature and the environment?
- Do you like working with students or other people?
- Are you interested in educating others on the environment?
- Are you interested in leading programs?

Outlook:

Salary- Salaries range from \$34,000-\$92,000 a year depending on your experience and location

Education/Program of Study:

- Most positions require a 4-year bachelor's degree.
 - People typically earn their degree in environmental science, geography, ecology, or other related areas
